SUMMARY

Motivated Software Engineering student at Cal State San Marcos with hands-on experience in backend services, RESTful APIs, database systems, and mobile development. Proven ability to collaborate in SCRUM teams, deliver features end-to-end, and solve real-world problems. Seeking a software engineering internship to apply full-stack and systems skills in a professional environment.

EDUCATION

B.S. Software Engineering | California State University San Marcos *Aug 2022 – Jun 2027*

Relevant Coursework: Data Structures & Algorithms, System Design & Architecture, Database Management, Object-Oriented Programming

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript

Frameworks & Tools: React Native, FastAPI, RESTful APIs, Tkinter, OracleDB, Git/GitHub

Concepts: Agile/SCRUM, Data Structures, System Design & Architecture, Database Management, OOP

PROJECTS

ProxiAlert — Campus SOS App | *React Native, FastAPI, Clerk Authentication*

- Developed a one-tap emergency SOS mobile app aimed at improving campus safety response times, directly addressing unreliable E-pole infrastructure.
- Integrated Clerk Authentication for secure user identity management and FastAPI for a performant, async backend.
- Designed mobile UI in React Native with a focus on speed and accessibility under stressful conditions.

Online Banking Web App | *Java, JavaScript, HTML/CSS, RESTful API, OracleDB*

- Collaborated in a SCRUM team to build a full-stack banking system with account management and transaction features.
- Designed and integrated RESTful API endpoints connecting a Java backend to a JavaScript/HTML frontend with OracleDB persistence.
- Practiced Agile ceremonies (standups, sprints, retrospectives) to deliver features incrementally.

File Organizer — Desktop GUI App | *Python, C++, Tkinter*

- Built a cross-language file organization tool that categorizes files by extension given a folder path, implemented in both Python and C++.
- Extended the Python version with a Tkinter GUI, enabling drag-and-drop folder selection and easier visibility for the user.
- Planning future features: file renaming, and undo history, file preview.

Emergency Room Queue System | *C++*

- Engineered a priority-based ER queue using a min-heap for triage ordering combined with a FIFO queue to preserve arrival order within equal priorities.
- Implemented a CLI menu supporting patient add, remove, and lookup operations with optimized O(log n) insertion.

WORK EXPERIENCE

Photopass Photographer | Walt Disney Company *Jun 2024 – Present*

- Consistently deliver high-quality guest experiences in a high-volume, fast-paced environment with reliability under tight time constraints.
- Collaborate cross-functionally with multiple departments to resolve operational issues and sustain efficiency.
- Rapidly adapt to shifting guest needs, environmental conditions, and changing operational requirements.

Community Service Officer | CSUSM Police Department *Aug 2022 – Aug 2024*

- Maintained campus safety through systematic patrols, facility lockups, and first-responder support.
- Communicated critical information clearly and accurately to officers and dispatch under time-sensitive conditions.
- Developed conflict resolution and community engagement skills through daily interaction with the campus community.
